

# KICK START BOTTLE

Use when starting HOTBIN in winter or re-starting after a holiday where lid thermometer reads below 15°C.

## How To Use:

Carefully fill bottle with boiling water, replace lid tightly, make a space in the top layer of waste, situate bottle and cover with fresh waste.

Leave for 24 hours and **do not** open lid.

**Note:** If starting in winter you must create your base layer of waste (40cm deep) first.

## Result:

Bacterial process will be kick-started. Check lid thermometer is above 15°C after 24 hours, if not repeat process once more.

## WARNING

Once full, bottle is extremely hot - wear gloves and handle with care. This bottle is designed to hold hot water - **DO NOT** substitute with another plastic/glass bottle as this may cause injury.
